Full Disclosure and Ethical Compliance Summary

This document was prepared and submitted by Robert James Angus in connection with the launch of a public Kickstarter campaign involving multiple breakthrough technologies, including PulsePay™, a self-refilling water bottle, and a 3-in-1 ultra-low-power survival system. It represents the full extent of my ethical, legal, and humanitarian efforts throughout this project.

Summary of Disclosures and Ethical Commitments

- All technologies are patent-pending and filed properly with the USPTO.
- All relevant documentation, disclosures, and provisional applications have been uploaded and made publicly available.
- The humanitarian model has been committed to from the beginning, including the 'Pulse for Life' pledge to donate 50% of licensing revenue generated during the Kickstarter.
- The holographic display system is publicly disclosed but withheld from for-profit licensing unless this campaign is fully funded and all humanitarian promises are fulfilled.
- PulsePay™ was designed to ethically redistribute financial power, free for humanitarian use, and built in partnership with a single ethical developer.
- Transparency has been maintained throughout the process with timestamped evidence, public AI-supported development, and public filing backups.
- All campaign materials were built honestly, with AI assistance, and reflect the sole inventor’s true intent to create a better, more equitable world.

Conclusion

This document should serve as irrefutable evidence that every action taken prior to and during the Kickstarter campaign was made in good faith, ethically, and legally. I invite the world to hold me accountable, support the mission, and build a future that uplifts everyone — not just those already in power.
